- United with the company official on a variety of IT projects
- Fulfilled comprehensive analysis of software requirements
- Excelled in providing throughputs in iterations of application development
- Facilitated efforts in association with team workflows
- Projects:
    - FoodieApp: Delivered engineering and architecture aspects of modern **Springboot** application
    - GSTV: Responsible for improvements for dashboard UI/UX using **Javascript**, **ReactJS-Redux**
    - AgendaOrganizer: Tasked with providing a **RESTful APIs** using **MeteorJS** and improved code quality in **Javascript**, **ReactJS**

EDUCATION
University of Washington – Tacoma, WA   Sep, 2015 – Dec, 2017
Bachelor of Science in Computer Science, GPA: 3.80

PERSONAL PROJECTS
Fullstack WebApp with JS -React-Redux-MongoDB
- **ShopEase** - This is an e-Commerce web app built with **ReactJS-Redux** for a dynamic and interactive UI, **Javascript** for seamless functionality and **CSS Tailwind** to design a clean, responsive layout.
- **GradTrack** – Using high level of **ReactJS** with **Javascript** to manipulate UI with dynamic data using **MongoDB** for organizing the employment information of graduate students.

Fullstack WebApp with Java
- **GradTrack** – Created UI using **Java Swing** and created a small database using **MySQL** for organizing the employment information of graduate students

Android App
- **OutOfGas** – Mobile application enables drivers to search nearby gas stations using **GPS** by using **Google Maps API** with detailed map view, and made calls to a web service to connect to a database.
